Environmental Professional

Position overview:

MSK Engineers, a multidisciplinary engineering consulting firm, is seeking an Environmental Professional to join our growing team of creative, collaborative, and community-oriented professionals. Responsibilities will include assisting with the implementation of a range of environmental projects, including site assessments and remedial investigations for soil, groundwater, soil vapor, and indoor air investigations in accordance with applicable regulations, procedures, and technical guidance. The successful candidate must have a strong work ethic and professional demeanor, thrive on hybrid collaboration, and be willing to perform both in an office environment and in the field.

About us:

Headquartered in the historic train station in Bennington, VT, we support a hybrid work environment with multiple regional and satellite offices, including Burlington, VT and West Lebanon, NH. We specialize in site civil, environmental, geotechnical, permitting, regulatory assistance, transportation, survey, and construction administration, currently serving clients in VT, NY, CT, NH, MA, and CO.

We've been working in the public, nonprofit, and private sectors for over 30 years to support our mission of helping communities thrive by keeping people safe, healthy, and connected. From downtown redevelopment projects to the design of linked recreation trails for pedestrians and cyclists, to water system upgrades providing safe, clean drinking water to all citizens, we actively seek projects that assist disadvantaged communities, and we specialize in helping our clients overcome the financial and logistical challenges that accompany revitalization and redevelopment.

Our staff bring decades of experience, and our junior staff are regularly mentored and trained across each division, allowing us to provide consistent, high-quality, and innovative solutions. We offer a creative and flexible workplace while also maintaining a supportive, respectful, and professional environment for staff to reach their greatest potential.

You'll be provided with the chance to:

- Review and evaluate data to support Conceptual Site Models, evaluate remedial objectives, identify data gaps, and recommend modifications to remedial actions
- Prepare written reports, cost estimates, and other client deliverables, including ASTM Phase I and Phase II ESAs
- Perform data collection activities and conduct site reconnaissance
- Design and execute field investigations and sampling of soil, groundwater, and indoor air
- Prepare design reports and construction-level drawings
- Track and evaluate project progress, budgets, and recommend changes

Here's what you'll need:

- Bachelor's and master's degrees in environmental or civil engineering, or geology
- Professional Engineer (PE) license or Professional Geologist (PG) license
- Minimum 5+ years of experience in environmental consulting, with project management experience
- Ability to acquire the MA licensed Site Professional (LSP) credential within 3 years
- Thorough knowledge of state and federal environmental regulations and proven business development skills
- Ability to relocate to NH or to frequently travel to project sites throughout the New England area
- A strong fundamental knowledge of principles and practice in hazardous waste site characterization, remediation, monitoring, modeling, and groundwater hydrology
- Proficient in subsurface investigations and sampling protocols

Benefits:

As a people-first engineering firm, MSK is committed to the growth and well-being of our employees. We offer a full benefits package, including health insurance, matching retirement contributions, life insurance, and paid leave, as well as a competitive salary commensurate with experience and qualifications.
